SUMMARY

Backend Software Engineer with strong experience designing and building scalable, high-performance systems. Skilled in event-driven architectures, queue-based processing, distributed systems, and real-time monitoring, with a proven ability to optimize system performance, improve reliability, and handle high-volume workloads. Experienced in modernizing legacy applications, implementing robust APIs, and building extensible solutions for complex business requirements. Strong collaborator, capable of delivering production-ready software in dynamic, cross-functional environments.

EXPERIENCE

Back end developer

Tab TabGo

November 2023 - Present, Dubai, UAE

- Architected and implemented a modular, extensible backend library, enabling reuse across multiple services and reducing code duplication while accelerating development cycles.
- Collaborated with cross-functional teams to design and deploy scalable backend systems, applying best practices in API design, data modeling, and system architecture to meet business requirements.
- Contributed to high-impact distributed systems, including the Xbox Booking Central pipeline and Bolignet ISP Management System, optimizing performance, improving reliability, and supporting production-scale workloads.

Back end developer

Nimas technology

August 2022 - November 2023, zgharta,lebanon

- Enhanced and scaled integrations with Cisco Unified Communications Manager (CUCM), optimizing communication workflows and system stability.
- Improved performance of API endpoints and asynchronous jobs, reducing execution times by 60–80% through optimization of request handling and processing workflows.
- Architected and deployed a WireGuard-based VPN solution across hybrid infrastructure (MikroTik, OpenWRT, and cloud environments), enabling secure, low-latency remote access to internal systems.
- Engineered a full-stack school management platform with centralized data management and real-time monitoring of lab machines, improving operational efficiency and oversight.

PROJECT

Xbox

TabtabGo • December 2023 - Present

- Led the architecture and implementation of a highly scalable, distributed backend connecting multiple hotel reservation platforms with SecurePay's payment processing service, handling high-volume reservations with low latency.
- Designed and deployed multi-tenant integrations with dynamic per-hotel configuration, supporting heterogeneous workflows and business rules across hundreds of accounts.
- Built an event-driven, asynchronous processing pipeline using MassTransit and AWS SQS, implementing retry policies, dead-letter queues, and idempotent processing to ensure fault-tolerance and reliability at scale.
- Optimized reservation processing logic, including validation, persistence, and SecurePay synchronization, achieving ~60% faster API response times and ensuring data integrity across distributed systems.
- Engineered for extensibility and horizontal scalability, enabling rapid onboarding of new hotel integrations and handling peak loads exceeding thousands of reservations/day.

Bolignet

TabtabGo • November 2023 - Present

- Contributed heavily to the modernization of the Bolignet ISP management platform by migrating a legacy .NET Framework codebase to .NET 8, enhancing performance and maintainability.
- Automated critical service workflows for WiFi devices, VoIP, and third-party streaming orders, eliminating manual steps and increasing operational efficiency.
- Integrated scalable network monitoring with SNMP and GenieACS, enabling real-time infrastructure visibility and proactive fault detection across thousands of endpoints.
- Designed and implemented a campaigns and promotions module, supporting dynamic discount strategies to boost customer engagement.

MR40

Nimas technology • August 2022 - November 2023

- Led the design and implementation of a scalable ASP.NET backend API, automating VPN configuration and device provisioning across hundreds of distributed endpoints.
- Enabled seamless integration between on-premise MikroTik/OpenWRT routers and cloud servers, supporting dynamic VM creation and hybrid network orchestration.

- Implemented WireGuard server/client setup logic, establishing secure, encrypted tunnels across distributed nodes, ensuring confidentiality and integrity of network traffic.
- Developed advanced configuration modules for port forwarding and access control between VPN endpoints, enhancing network flexibility and administrator efficiency by ~70%.

Nimas-Nimas tecnology

August 2022 – November 2023

- Modernized and extended Nimas CUCM integration system, migrating legacy .NET Framework codebase to .NET 6 and improving system reliability and maintainability.
- Developed a dynamic, query-driven dashboard backend, enabling users to create real-time statistical widgets using custom function expressions, parsed, executed, and displayed on-demand.
- Architected and implemented a high-throughput CDR billing and call analytics system, handling thousands of call, meeting, and forwarding records per day, generating accurate bills and visualizing call relationships as dynamic graphs for insights.
- Engineered a high-throughput log ingestion service, capturing UDP logs from CUCM, queuing via AMQP, and persisting to the database, enhancing log retention by 90% and reducing packet loss.
- Optimized database queries and backend processes, reducing latency and improving system responsiveness under high load.
- Extended system integration capabilities, enabling future-proof expansion for monitoring, reporting, and call center automation.

EDUCATION

Bachelor's degree, Software Engineering

Minor in ITE , Software engineering • Homs university • Homs,Syria • 2022 • 82.34

Technical Diploma, Software Engineering

Minor in Software Engineering • Homs university • Homs,Syria • 2018 • 88.071

AWARDS & HONORS

ICPC programming contests

ICPC

- <https://icpc.global/ICPCID/HB69YM22MHDI>

SKILLS

C#,ASP.Net Core

RESTful APIs

SOLID principle & Design Patterns

Agile Methodologies

Monolithic , Microservices and Event driven architectures

CI/CD

Mass Transit, AMQP, AWS SQS

Problem Solving

.NET WinForms

liquid template language

Angular (basics)

WireGuard VPN

Ansible
